Washington, DC 20510

The Honorable Lisa Murkowski  
522 Hart Building  
U.S. Senate  
Washington, DC 20510

Dear Senators King and Murkowski:

We write to express our strong support for the Improving Data Collection for Adverse Childhood Experiences Act, which you introduced in May. This vital piece of legislation will build upon previous studies on Adverse Childhood Experiences (ACEs) in innovative and equitable ways.

ACEs are potentially traumatic events—in connection with abuse, neglect, and high community rates of violence, crime, or poverty—that occur in childhood and can have long-lasting effects on the life of an individual. As the number of ACEs an individual experiences increases, so does the risk for negative health outcomes like asthma, diabetes, cancer, substance use, and suicide in adulthood. The Centers for Disease Control and Prevention (CDC) estimate that 61% of adults report having experienced at least one ACE in their lifetime, and the prevention of ACEs could reduce cases of depression in adults by 44% and avoid 1.9 million cases of heart disease.<sup>1</sup> CDC has also noted that economic insecurity resulting from the COVID-19 pandemic can lead to ACEs by increasing the risk of violence and inconsistent access to food, transportation, and housing.<sup>2</sup>

The original ACEs study, which CDC and Kaiser Permanente conducted, significantly advanced our understanding of these effects. By categorizing ACEs into three groups—abuse, neglect, and household challenges—it demonstrated the link between the volume of ACEs and the risk of negative health outcomes.<sup>3</sup> The study, however, lacked a representative study population (focusing instead on predominantly white and middle-income patients) and insufficiently measured the impact of social and economic conditions.<sup>4</sup>

The Improving Data Collection for ACEs Act would enable CDC to build on the original study while addressing these concerns. The new study, for example, would focus on equity by including a diverse, nationally representative sample and examine the strength of the relationship between ACEs and negative health outcomes, the intensity and frequency of ACEs, and the relative influence of particular risk and protective factors. The legislation would also expand the scope of CDC's research to include the effects of social, economic, and community conditions on health and well-being. This critical research would inform current and future programs aimed at mitigating the negative effects of ACEs and promoting the health and well-being of children, families, and communities nationwide.

We applaud your bipartisan efforts to expand our knowledge of ACEs and how best to address their long-term health effects. Please reach out to Brandon Reavis, Senior Government Relations Manager at Trust for America's Health, at [breaavis@tfah.org](mailto:breaavis@tfah.org) with any questions or requests.

Sincerely,

2020 Mom
