PERSONNEL AND
READINESS

JUL 2 3 2024

The Honorable Mike D. Rogers
Chairman
Committee on Armed Services
U.S. House of Representatives
Washington, DC 20515

Dear Mr. Chairman:

The Department's response to section 599 of the James M. Inhofe National Defense Authorization Act for Fiscal Year 2023 (Public Law 117–263), "Report on Incidence of Military Suicides by Military Job Code," is enclosed. This report provides data and comparisons on the rates of suicides among Service members in the Department of Defense by occupational code.

The enclosed report provides a high-level summary of over 1,700 statistical comparisons completed by the Department to meet the intent of the requirement with statistical reliability for suicides. As further explained in the report, the Department did not capture or reliably track deaths by suicide prior to January 1, 2011. As such, it was not able to correlate deaths from suicide with occupational codes prior to 2011. The information resulting from this report may support ongoing Departmental efforts and decision-making for suicide prevention in the military community.

Thank you for your continued strong support for our Service members. I am sending a similar letter to the Senate Armed Services Committee.

Sincerely,

Ashish S. Vazirani
Performing the Duties of the Under Secretary of
Defense for Personnel and Readiness

Enclosure:
As stated

cc:
The Honorable Adam Smith
Ranking Member

JUL 2 3 2024

The Honorable Jack Reed
Chairman
Committee on Armed Services
United States Senate
Washington, DC 20510

Dear Mr. Chairman:

The Department's response to section 599 of the James M. Inhofe National Defense Authorization Act for Fiscal Year 2023 (Public Law 117–263), "Report on Incidence of Military Suicides by Military Job Code," is enclosed. This report provides data and comparisons on the rates of suicides among Service members in the Department of Defense by occupational code.

The enclosed report provides a high-level summary of over 1,700 statistical comparisons completed by the Department to meet the intent of the requirement with statistical reliability for suicides. As further explained in the report, the Department did not capture or reliably track deaths by suicide prior to January 1, 2011. As such, it was not able to correlate deaths from suicide with occupational codes prior to 2011. The information resulting from this report may support ongoing Departmental efforts and decision-making for suicide prevention in the military community.

Thank you for your continued strong support for our Service members. I am sending a similar letter to the House Armed Services Committee.

Sincerely,

Ashish S. Vazirani
Performing the Duties of the Under Secretary of
Defense for Personnel and Readiness

The Honorable Roger F. Wicker
Ranking Member

Report to the Committees on Armed Services of the Senate and the House of Representatives

Report on Incidence of Military Suicides by Military Job Code

July 2024

Background

This report responds to section 599 of the James M. Inhofe National Defense Authorization Act (NDAA) for Fiscal Year (FY) 2023 (Public Law 117–263), which requires the Department of Defense (DoD), in coordination with Secretary of Homeland Security, with regards to the Coast Guard, to conduct a review and submit a report on the rates of suicides in the Armed Forces beginning after September 11, 2001 disaggregated by: (1) year; (2) military job code; and (3) whether the member was serving on active duty, in the National Guard or as a member of the Reserve. The report is required to include (1) a compilation of suicide data by military job code to determine which military career fields have a higher per capita suicide rate compared to (A) other military career fields; (B) the overall suicide rate for each Armed Force; (C) the overall suicide rate for the DoD; and (D) the national suicide rate, for the same period; and (2) disaggregation of suicide data by age categories consistent with the DoD Annual Report on Suicide in the Military.

The Coast Guard operates under the Department of Homeland Security (DHS), unless operating under the Department of the Navy. In coordination with DHS, DoD reviewed the available suicide and occupational data among Coast Guard uniformed members from 2019 (the first year of available suicide data) through 2022. During that time, the Coast Guard experienced relatively low suicide death counts per year—ranging from 4 to 14 total events per year. Rates such as these, calculated from low absolute numbers are highly sensitive to small changes over time, and are unreliable for comparison within and between groups, such as other Services or occupational categories. Such low numbers also limit the ability to stratify counts by key demographic variables such as age and duty status (e.g., Active, Reserve), introducing concerns regarding potential identification of Service members who died by suicide. Additionally, the Coast Guard does not currently collect data on a member's occupation at the time of death, limiting the ability to incorporate Coast Guard suicide and occupational data into this report.

As such, unless otherwise indicated, all data and references contained in the report refers to DoD data.

Overview of Methodology

The Defense Suicide Prevention Office (DSPO), in collaboration with epidemiologists and statisticians from the Defense Health Agency's Psychological Health Center of Excellence, developed the analytic approach, completed the analyses, and summarized the findings for this report. For more information on the statistical analysis see Appendix A.

Data Sources

The Armed Forces Medical Examiner System (AFMES) is the official DoD entity responsible for verifying and reporting deaths by suicide for Service members in the Active Component and,

to the extent available, the Reserve Component, to DSPO.[1,2] DSPO was established in Calendar Year (CY) 2011 and is responsible for reporting suicide data as outlined in Department of Defense Instruction (DoDI) 6490.16, "Defense Suicide Prevention Program," November 6, 2017, as amended. This report presents data from CY 2011-2022 and uses the most consistent collection of suicide data across the DoD.

The DoD is unable to provide reliable data on suicide deaths prior to CY 2011 as it did not have a standardized reporting methodology and therefore is unable to correlate occupational codes of Service members who died by suicide prior to 2011 or provide suicide rates for the years prior to CY 2011. Attempts to correlate possible suicide deaths with the National Death Index data was met with many discrepancies deeming the results from such attempts as unreliable.

For each DoD Service member identified by AFMES as having died by suicide between 2011-2022, DSPO identified related demographic and military information necessary to complete this report from the Defense Manpower Data Center (DMDC), which provides authoritative personnel information at the DoD-level. DMDC also provided the total population data for each DoD Primary Occupation Code by CY and broken down by DoD Military Service, age group, sex, and Component (all required to complete this analysis). To identify military job codes or groups for each DoD Service member who died by suicide consistently across time and between the Service Branches, this analysis and report are based on DoD Primary Occupation codes from the DoD-level master Occupational Database as outlined in DoDI 1312.01, "Department of Defense Occupational Information Collection and Reporting," January 28. 2013, as amended. Primary DoD Occupation Codes and associated names and groupings are summarized in Table A of Appendix B.[3]

U.S. population suicide data for the comparisons in part (d) stated above are from the Web-based Injury Statistics Query and Reporting System and were available through 2021 at the time this report was authored.

Suicide Rate Calculations

A suicide rate is defined as the number of Service members who died by suicide with a specific Primary DoD Occupation Code at the time of death (numerator) divided by the number of all Service members in that same DoD Occupation Code each year, then multiplied by 100,000.

In line with Paragraph 3.4.h. of DoDI 6490.16, and consistent with the reporting in the DoD Annual Reports on Suicide in the Military, the DoD only reports suicide rates when there are 20 or more Service members who died by suicide to provide reliable suicide rate estimates and comparisons. Suicide rates are not disaggregated by year because doing so would not provide sufficient data to calculate a suicide rate for the military occupations. Unstable or unreliable

---

[1] Active Component: Full-time members of the DoD Armed Forces, including Cadets/Midshipmen at the designated Military Service Academies.
[2] Reserve Component: Limited to DoD members of the Selected Reserves (SELRES). SELRES are drilling and training members of the National Guard and Reserve, Individual Mobilization Augmentees, and full-time support Active Guard and Reservists. This excludes members of the Individual Ready Reserve and Inactive National Guard.
[3] Due to the length of the Supplemental Tables A-J, they are provided separately in Appendix B.

rates can lead to invalid or incorrect conclusions about suicide rate differences because it is difficult to distinguish between random fluctuation/natural variation ("noise") and true change ("signal") with a high degree of confidence.

Results

Between 2011-2022, the DoD identified 5,997 Service members who died by suicide in both Active and Reserve Components (3,665 Active Component and 2,332 in the Reserve Component of which 930 were in the Reserve and 1,402 were in the National Guard (including Service members in an active duty status and in non-duty status)). Data was aggregated across the 2011-2022 time period to obtain sufficient numbers in each of the occupation codes and allow for comparison across the codes in response to subsection (a) of section 599 of the NDAA for FY 2023. Among the 5,997 Service members, 222 DoD Primary Occupation Codes were represented when using the full 6-digit code and 135 when using the first 3 digits of the code for enlisted Service members and the first 4 digits among officers.

Comparisons between Occupation Codes

Among enlisted Service members who died by suicide, there were 42 occupation codes with sufficient data (at least 20 suicide deaths across 2011-2022) and are provided in Table 1 below.

Table 1: Aggregated Suicide Rates and Number of Suicide Deaths by Occupation Code Across 2011-2022 Among Service Members in Each Occupation Code: Enlisted and Officer

Occupation Code (3 and 6 digit)	Occupation Code Name	Number of Suicide Deaths	Suicide Rate
Enlisted Primary DoD Occupation Codes			
143	Ordnance disposal and diving	35	34.77
143100	EOD/UDT	30

2202	Other fixed-wing pilots	23	9.49
220200	Other Fixed-Wing Pilots	23	
2203	Helicopter pilots	24	8.29
220300	Helicopter Pilots	24	

As this comparison does not account for age and sex differences in each of the occupation codes, additional analyses were done to identify occupation codes with the highest suicide risk. This required a statistical comparison between each occupation code to every other occupation code in response to subsection (b)(A) of section 599 of the NDAA for FY 2023. The analyses resulted in 1,722 total comparisons and 861 unique comparisons of suicide rates between pairs of occupation codes (Table B of Appendix B). Each comparison is shown twice so all occupations can be both an index occupation and a reference occupation for all other occupation codes. This allowed for a more complete description of instances where rates are higher or lower between codes instead of only identifying when the index group was higher or lower.

Table C of Appendix B summarizes the number of times each occupation code had strong evidence of higher (both end points of the 95 percent confidence interval above 1) or lower suicide rates (both end points of the 95 percent confidence interval below 1) when compared the referent occupation code.

- Enlisted Service members with the occupation code 101 (Infantry) had higher suicide mortality rates than 21 other occupation codes, followed by Service members with the occupation code 143 (Ordnance disposal and diving), 103 (Combat engineering), 130 (Medical care), and 149 (Technical specialists not elsewhere classified).

- Enlisted Service members in occupation code 195 (Not occupationally qualified) and 191 (Officer candidates and students) had a lower suicide rate than 38 other occupation codes followed by Service members with the occupation code 153 (Data processing), and 115 (ADP computers).

There were eight occupation codes, including one group that combined all occupation codes with fewer than 20 events among officers who died by suicide, resulting in 28 unique comparisons between pairs of occupation codes for officers. Table D of Appendix B shows each comparison presented twice for the same reason described above among enlisted Service members. There were no occupation codes with strong evidence of a higher or lower suicide mortality rate than any other occupation code among officers.

Service-Specific Suicide Mortality Rate Comparisons

Among enlisted Service members for each DoD Military Service, there were a total of 63 comparisons with sufficient data for analysis (Table E of Appendix B) in response to subsection (b)(1)(B) of section 599 of the NDAA for FY 2023.

- Of the 11 comparisons for the Air Force, all occupation codes had suicide mortality rates consistent with the total enlisted Air Force rate, except for in the occupation code 195 (Not occupationally qualified), which had a lower rate.

- Of the 27 comparisons for the Army, Soldiers in occupation codes 101 (Infantry), 103 (Combat engineering), and 164 (Armament and munitions) had evidence of higher suicide mortality rates than total enlisted Army population. Soldiers in occupation codes 153 (Data processing), 155 (Other functional support), and 191 (Officer candidates and students) had evidence of lower suicide mortality rates than the total enlisted Army rate.

- For the Marine Corps (11 comparisons), Marines in the occupation code 101 (Infantry) had a higher suicide rate than the total enlisted Marine Corps rate while Marines in the occupation code 195 (Not occupationally qualified) had a lower rate.

- For the Navy (14 comparisons), only Sailors in occupation code 183 (Law enforcement) had evidence of a higher suicide mortality rate from the total enlisted Navy rate.

Only Army had occupation codes with sufficient event counts (20 or more) for comparison to the total officer Army suicide rate (Table F of Appendix B). Occupation codes 2203 (Helicopter pilots) and 2205 (Ground and naval arms) had suicide rates consistent with the total officer Army rate.

DoD Suicide Mortality Rate Comparisons

Some occupation codes are not represented among all the DoD Military Services. In those instances, the DoD rate only reflects the aggregated rate of the DoD Military Services that have each specific occupation code (marked in Tables G and H of Appendix B) in response to subsection (b)(1)(C) of section 599 of the NDAA for FY 2023.

Among enlisted Service members across the DoD, there were a total of 42 comparisons with sufficient data for analysis (Table G of Appendix B). Thirty of the 42 enlisted occupation codes were compared against the total DoD rate that included all four DoD Military Services. Of these 30:

- Occupation codes 101 (Infantry), 125 (Combat operations control), and 149 (Technical specialists not elsewhere classified) had evidence of higher suicide mortality rates than the total DoD rate.

- Occupation codes 115 (ADP computers), 153 (Data processing), 160 (Aircraft and aircraft related), and 195 (Not occupationally qualified) had evidence of lower suicide mortality rates than the total DoD rate.

Among the other 12 occupation codes who did not have representation in all the Services:

- Occupation code 104 (Artillery/gunnery, rockets, and missiles) had evidence of higher suicide mortality rates compared to a DoD population based on combined rates from the Army, Marine Corps, and Navy.

- Occupation code 130 (Medical care) had evidence of higher suicide mortality rates compared to a DoD population based on combined rates from the Air Force, Army, and Navy.

- Occupation code 106 (Seamanship) had evidence of lower suicide mortality rates compared to a DoD population based on combined rates from the Army and Navy.

- Occupation code 191 (Officer candidates and students) had evidence of lower suicide mortality rates compared to a DoD population based on combined rates from the Air Force and Army.

Among officers across the DoD, there were a total of 8 occupation codes, including a combined code of all other officer occupations with less than 20 deaths (code 9999), with sufficient data for comparison to the officer DoD suicide mortality rate (Table H of Appendix B). Like the enlisted occupation codes, some officer occupation codes were not represented in all the DoD Military Services. There was no strong evidence of any differences.

U.S. Population Suicide Mortality Rate Comparisons

There were 49 occupation codes with sufficient data (more than 20 suicide deaths) to compare rates against the U.S. population rate, age 17-59, aggregated from 2011-2021 (Table I of Appendix B) in response to subsection (b)(1)(D) of section 599 of the NDAA for FY 2023.

- Fourteen occupation codes had evidence of a higher rate than the U.S. adult population, all of which were among the enlisted population. Of these, the three groups with the highest adjusted rates were 102 (Armor and amphibious), 101 (Infantry), and 103 (Combat engineering).

- There were 10 occupation codes with evidence of a lower rate than the U.S. population, ages 17-59, all of which were among the officer population except for one which was

among the enlisted population. The occupation codes with the lowest adjusted suicide mortality rates were 2202 (Other fixed-wing pilots) and 2203 (Helicopter pilots).

Suicide Data by Age and Occupation Code Categories

Table J of Appendix B shows the number of Service members who died by suicide between CY 2011-2022 in each occupation code by age categories consistent with the DoD Annual Report on Suicide in the Military in response to subsection (b)(2) of section 599 of the NDAA for FY 2023. This table has no comparisons and does not include overall population totals or accompanying rates. However, all comparisons summarized above were standardized for age differences in each comparison using these same age groups.

Appendix A: Statistical Analysis of DoD Data

An initial analysis was conducted of annual suicide rates by the full 6-digit Primary DoD Occupation Code[5] for all Service members combined. This analysis produced a small number (3) of enlisted occupations with 20 or more Service members who died by suicide over between 2011-2022 to calculate and compare rates. For a more comprehensive analysis and to better align with the intent of the language in section 599 of the FY 2023 NDAA, occupation codes were grouped by the first 3-digits of the 6-digit code for enlisted Service members and the first 4-digits for officers to produce more groupings of Service members by the Primary DoD Occupation Code with more than 20 deaths per year and allow for more comparisons. For the same reason, suicide counts, and total population counts were aggregated across 2011-2022 to determine an aggregated suicide rate for each occupation group. Occupation groups with fewer than 20 Service members who died by suicide were aggregated into an 'other' category. Space Force, which was established in 2019, was excluded from the analysis since there were no deaths by suicide between 2019-2022.

Poisson regression models[6] were used to compare suicide mortality rates between occupation groups. Suicide rates in the military can differ over time, by demographic and military characteristics therefore rates were adjusted for age, sex, service, component, and CY. As a result, variance in rates between any two groups were not due to those differences. This analysis was conducted separately for enlisted Service members and officers since officers have a lower suicide rate than enlisted Service members,[7] and it was not possible to adjusted for rank in the analysis.[8] To compare suicide rates among Service members between any two occupation groups, a rate ratio and a 95 percent confidence interval was used to determine whether one group ("index group"- the one being assessed) has lower, higher, or similar rates to another group ("referent group"- the one being compared to). Rate ratios greater than one mean that the suicide rate for Service members in the index occupation group have a higher rate than the referent occupation group. Conversely, when a rate ratio is less than one then the suicide rate for Service members in the index occupation group is lower than the suicide rate for referent occupation group. The 95 percent confidence intervals represent statistical uncertainty in the comparison. This is industry standard practice for statistical comparisons (where appropriate). Comparisons where both end points of the confidence interval fall on the same side provide evidence of a true difference ("signal") between the Service members in the two occupation groups.

To accomplish the suicide rate comparisons required by the NDAA for FY 2023 between DoD Service members in each occupation group to Service-specific, DoD, and U.S population rates,

---

[5] See DoDI 1312.01, "Department of Defense Occupational Information Collection and Reporting," January 28, 2013, as amended, for more information.

[6] Adjusted rates are estimated using a generalized log-linear regression model based on the Poisson distribution (i.e., change is linear in the log of the rate) and a large matrix or contingency table with decedent and population totals by strata (e.g., year, age category, sex, Component or Service).

[7] Department of Defense Annual Report on Suicide in the Military Calendar Year 2022.

[8] Rank is directly tied to occupation code, meaning specific occupation codes are assigned to either Enlisted or Officer. Rank is considered a confounder and confounders are not appropriate for adjustment in regression modeling.

indirect standardization[9] was used to account for age and sex differences between those groups. When comparing suicide rates across populations that have different percentages of certain demographic groups associated with higher rates of suicide (e.g., men and younger age groups), standardization allows for more accurate or reliable comparisons where the outcomes of the comparison do not reflect of underlying differences in age and sex.

Aggregated data from 2011-2022 was used as the standard population (up to 2021 for the U.S. population). Not all occupation groups were used in each DoD Military Service. For example, the Marine Corps does not have Service members assigned to DoD Primary Occupation Code 130 (medical care) for enlisted Service members and 2601 (physicians) for officers. Because of the lack of eligibility of some occupation groups in one or more DoD Military Service, the total DoD rate comparison only applied to the DoD Military Service where the occupation group was present. For example, the suicide rate for Service members in the occupation group 130 was compared against a total DoD rate based on Air Force, Army, and Navy data. Marine Corps was excluded because there are no Marines assigned to this occupation code.

---

[9] Indirect standardization accounts for differences in the demographic makeup because the number of suicide deaths within subsets of the military population are very small. A Poisson distribution along with the military age-and sex-specific stratum population size was then used to estimate the standardized mortality ratio between the two groups being compared (reference and index groups). That standardized mortality ratio was used to adjust the rate in the index group.

Appendix B: DoD Supplemental Tables A-J

Table A: Primary DoD Occupation Codes Among Service Members in the Active and Reserve Components Who Died by Suicide, CY 2011-2022

Primary DoD Occupation Code (first 3-digits)	Name	Primary DoD Occupation Code (6-digits)	Name
Enlisted Primary DoD Occupation Codes			
100	Unknown, Enlisted	100000	Unknown, Enlisted
101	Infantry	101000	Infantry, General
		101100	Special Forces
		101200	Military Training Instructor
102	Armor and Amphibious	102000	Armor and Amphibious, General
103	Combat Engineering	103000	Combat Engineering, General
104	Artillery/Gunnery, Rockets, and Missiles	104100	Artillery and Gunnery
		104200	Rocket Artillery
		104300	Missile Artillery, Operating Crew
105	Air Crew	105000	Air Crew, General
106	Seamanship	106000	Boatswains
		106100	Navigators
		106200	Small Boat Operators
		106300	Seamanship, General
108	Unmanned Vehicle Systems Operations	108000	Unmanned Vehicle System (UVS) Operators, General
110	Radio/Radar	110000	Radio/Radar, General
		110100	Communications Radio
		110200	Navigation, Communication, and Countermeasure, N.E.C.
		110300	Air Traffic Control Radar
		110400	Surveillance/Target Acquisition and Tracking Radar
111	Fire Control Electronic Systems (Non-Missile)	111300	Shipboard and Other Fire Control
112	Missile Guidance, Control and Checkout	112100	Missile Guidance and Control
		112300	Torpedo Repair
113	Sonar Equipment	113000	Sonar, General

Table H. Results of the Comparison Between Aggregated Suicide Rates for Occupation Codes Across DoD Military Services and the Overall Aggregated DoD Suicide Rates Between 2011-2022 (Officers)

Note: **Blue** indicates when the Index Occupation Group has **strong evidence of higher rates** than the Referent Group (both lower and upper bound 95% CI are above 1) and **Green** indicates when the Index Occupation Group has **strong evidence of lower rates** than the Referent Group (both lower and upper bound 95% CI are below 1).

Index Group			Referent Group		Rate Comparison Results		
Index Occupation Code	Index Occupation Code Name	Sex and Age adjusted Aggregated suicide Rate for Occupation Code in each Service	Included in DoD Rate (F= Air Force, A=Army, M=Marine Corps, N=Navy)	Aggregated Suicide Rate for total Officers in each Service	Rate Ratio	Lower Bound of 95% CI	Upper Bound of 95% CI
2202	Other fixed-wing pilots	8.49	FAMN	12.11	0.70	0.41	1.20
2203	Helicopter pilots	10.14	FAMN	12.11	0.84	0.49	1.42
2205	Ground and naval arms	14.43	FAMN	12.11	1.19	0.91	1.56
2301	Intelligence, general	12.64	FAMN	12.11	1.04	0.65	1.67
2401	Construction and utilities	13.36	FAMN	12.11	1.10	0.62	1.96
2605	Nurses	15.81	FAN	12.08	1.31	0.76	2.27
2902	Students	10.36	FAMN	12.11	0.86	0.49	1.50
9999	All other officers	11.92	FAMN	12.11	0.98	0.85	1.14

Table I. Results of the Comparison Between Aggregated Suicide Rates for Occupation Codes Across DoD Military Services and the U.S. Population Suicide Rate for Ages 17-59 Aggregated Between 2011-2021 (Enlisted & Officers)

Note: **Blue** indicates when the Index Occupation Group has **strong evidence of higher rates** than the Referent Group (both lower and upper bound 95% CI are above 1) and **Green** indicates when the Index Occupation Group has **strong evidence of lower rates** than the Referent Group (both lower and upper bound 95% CI are below 1). U.S. population data was available through 2021 at the time this report was written.
